PERMEABLE PAVER EDGE RESTRAINT

THE SOLUTION TO SECURING THE PERMEABLE PAVER EDGE!

- Spikeless PICP Edge Restraint – holds permeable pavers firmly and permanently in place
- Comes fully assembled – Geogrid anchor is permanently attached to the SnapEdge paver restraint
- Installs on top of the stone chip setting bed
- One piece design for straight and curved applications
- Integral section to section connector
- Edging is 100% recycled material

**INSTALLATION OUTLINE**

- Excavate area the depth required to meet design criteria and extend 6” past (outside) the edge of the paving stones.
- Install soil separation fabric along the sides of the excavation with a minimum of 12” of additional fabric extending past the top of the excavation.
- Install stone base into excavated area.
- 1st layer-Minimum of 6” thick ASTM NO. 2 open graded stone
- 2nd layer-4” thick ASTM NO. 57 open graded stone
- Install stone setting bed on top of stone base.
- 1.5-2” thick of ASTM NO. 8 aggregate
- Fold fabric over top of the setting bed and under PermEdge and first paver. (See drawing above.)
- Install PermEdge. Start on one side of pavement area.
- Locate PermEdge per design. Be certain that it sits on top of the soil separation fabric flap that lays on top of the setting stone.
- Use 3/8’s spikes to temporarily hold edging in place
- Unfold grid and extend it full length into the pavement area. Be careful to lay grid evenly over setting bed stone, insuring there are no folds/wrinkles in the grid.
- Installing the edging with a radius will require that back support of the PermEdge be cut as well as the grid slit in even increments (suggested 12-18”) perpendicular to the edging. Tighter radius will require shorter increments (more slits)
- Start along the PermEdge installing the paving stones in the desired pattern.
- Extend the field of pavers out from the first edge to approximately 6’ away from the other desired edge. Stop laying pavers at this point.
- Locate 2nd edge per the module, spiking down PermEdge temporarily.
- Prepare fabric similarly to opposite side so it is on top of stone setting bed and will lay under PermEdge and first paver.
- Once 2nd PermEdge is located and secure, go back and continue to install paving stones towards second edge.
- Make any required paving stone cuts.
- Once all cuts are complete, finish installation.
- Compact stone with appropriate plate compactor
- Fill pavement voids with appropriate, open graded stone chips
- Remove all temporary spikes from PermEdge.
