

STEP FILLER BLOCK

Step Filler Block was designed to be used with any of our 6" high or 8" high wall products – by turning the block to the appropriate height - to fill the interior cavity of step risers and landings. This product eliminates the need to fill and compact those difficult areas with stone when constructing steps. Installing the Step Filler Block over a ground level base of compacted stone provides a quick and cost effective solution for the interior construction of all types of steps. The solid units are easily handled and cut. Their full dimensions make installation and leveling a snap and their solid construction eliminates the need for core filling with clean stone.

100% solid

SIZE	6"h x 15 5/8"l x 8"d
PCS PER CUBE	72
LBS PER PIECE	55
LBS PER CUBE	3,968
